Subject
"Complaints Arrangements Submission, Attention: Practitioner Regulation Subcommittee",

As an opinion of a mere consumer, I feel that National Regulation would be beneficial to all involved.

Of particular interest to me, is that there would be continual Accountability for the services provided by any Medical Practitioner.

As the current state systems appear to work, from my own experience, is that a Medical Practitioner whom performs an act/s of grossly unsatisfactory professional conduct, Professional Misconduct, abuse of position of Authority, to criminal actions, etc - and is then notified of the pending/current investigation only has to relocate interstate to escape any form of responsibility for his actions.

This can/does cause a great deal of distress in the person whom has been harmed by these actions, due to no avenue of redress.

I can only hope that this may support the proposed changes to the current health care system.

If any further details would be of assistance, such as the Doctor's (mentioned above) details, please do not hesitate in contacting me.

Thankyou.

Yours Sincerely,
L.Kay.
